# International Space Station

Documentation

Included Scenes

When you import the package, a folder named ISS will be added to your project.

There are numerous scenes. _All contains the complete space station while the rest of the scenes are individual modules.

Choose the one depending on your requirements. Lighting is bake ready so you can bake anytime you want.

Important

The scenes and lighting looks best (and according to the pictures) with Post Processing in Unity 2017+.

Please import the latest Unity Post Processing package and the script references will automatically work giving you a much better look and feel of the space station.

Thank you for Purchasing

Thank you for purchasing the asset. If you require any help or face any issues, feel free to contact us for support.
